

Jalalabad Joins AWCC's High Speed 3G Network

Fast is our favorite word here at Afghan Wireless especially when it relates to fulfilling our favorite mission providing the fastest Voice, Data and Internet Connectivity to our clients.

This week, Jalalabad became the latest leading city in Afghanistan to join AWCC's high speed 3G network. Right now thousands of our clients in Jalalabad are talking, streaming and surfing on Afghanistan's most advanced and fastest wireless communications network.

At the beginning of 2015, we set an ambitious goal for our company by the end of 2015 we would be the only wireless company providing high speed communications service to every major city in Afghanistan. And I'm happy to report that we are well on our way to achieving our goal. Jalalabad is the tenth city in Afghanistan to join AWCC's high speed 3G network. And AWCC will launch 3G high speed services in additional cities before the end of 2015.

Our Jalalabad based consumer and business clients can now use one of eight customizable service plans to talk in the clearest most natural sound possible via AWCC HD VOICE Services. AWCC's high definition voice solution, together with our high speed 3G service, prevents dropped calls and will provide deep indoor coverage throughout Jalalabad.

AWCC's 3G high speed service enables our clients to send and receive the largest data files, access the fastest download speeds and utilize an array of the most innovative file sharing, streaming, video and data services. Our clients in Jalalabad and you too can learn more about how to use their new high speed service by reading the Company's Frequently Asked Questions (FAQ), Information Sheet: <http://afghan-wireless.com/internet-3g2g/3g-internet/3g-faqs/>.

Connecting Afghanistan is the mission which motivates everyone here at Afghan Wireless to develop the fastest networks and most innovative communications services that connect you to the people, places and ideas that matter most to you. So, let's celebrate this era of fast communications, high speed networks and the power they give us to create an Afghanistan that is connected, communicating and confident about its progress.

Until next time,

Ehsan
